

# Secure your data and IT equipment and be compliant with ESG?

## Choose for IT Asset Lifecycle Management by Iron Mountain

---

**IT asset management is very important. After all, your data is extremely valuable to you, but also to competitors and cybercriminals. Therefore, it is crucial to handle your data and the IT assets in which it is stored safely. Especially when your assets are at the end of lifecycle but data still remains on it. Iron Mountain, strategic partner of Datacenter United, offers a tailor-made solution for this: IT Asset Lifecycle Management (ALM).**

### What does ALM involve?

Asset Lifecycle Management is a strategic approach to IT asset management from deployment and active use to safely decommissioning, disposal, recycling or remarketing of IT assets such as servers, storage bays, desktops and laptops.

As a result, you:

- are ESG compliant (environmental reporting)
- reduce your environmental impact
- protect your data
- save time and costs
- optimise the use of your assets
- increase financial returns

## How does ALM by Iron Mountain work?

- Iron Mountain arrives onsite and prepares the IT assets for transport (unracking & packaging)
- We make an inventory of the hardware and a complete IT asset overview
- All data is securely and completely erased
- We dismantle, destroy or recycle your IT assets in an environmentally friendly way
- Remarketed assets generate value back to your company or a charity of your choice
- You receive the relevant certificates

## About Iron Mountain

Iron Mountain is your strategic partner for the preservation, protection, digitisation and optimal use of data in all kinds of physical and digital business records since 1951. As such, we bridge the gap between physical and digital data for 225,000 organisations worldwide, managing it throughout its lifecycle. As a result of that you increase efficiency, stay compliant with laws and regulations and reduce costs and risks. All with one partner with sustainability as a core value.
